ABSTRACT

The present invention provides a nerve regeneration-inducing tube in which nerve is inserted into a tubular structure and can be easily sutured and fixed without resort to any special instruments or operations, thereby allowing nerve cells to efficiently proliferate and grow in the correct direction. The nerve regeneration-inducing tube of the present invention includes: a tubular structure (A) made of a biodegradable material or a bioabsorbable material and provided inside with a matrix (B) having linear nerve-inducing channels and being made of a biodegradable material or a bioabsorbable material; and a definite space part provided at one end of the tubular structure (A).

- a... SPACE
- b... LINEAR NERVE-INDUCING CHANNEL
- c... TUBULAR BODY (A)

(57) Abstract: It is intended to provide a nerve regeneration-inducing tube wherein nerve is inserted into a tubular body and can be easily sutured and fixed without resort to any special instruments or operations, thereby allowing nerve cells to efficiently proliferate and grow in the correct direction. Namely, a nerve regeneration-inducing tube which has a tubular body (A) being made of a biodegradable material or a bioabsorbable material and provided inside with a matrix (B) having linear nerve-inducing channels and being made of a biodegradable material or a bioabsorbable material, and in which a definite space is provided at one end of the tubular body (A).
